MEDICINE DATABASE MANAGEMENT SYSTEM

This is a software designed to help both the customers and the shopkeepers to add, delete and modify medicines.
SQLite studio server is used to implement where the medicine is stored. Backend is done by Python Tkinter tool and stores data in the database. The tables created at the back end are later accused for retrieving the required information.
TO overcome the work done on paper and store it for a long period of time we can keep a computerised method.

PROBLEM STATEMENT

To develop an application for managing different types of medicine in a database. It should be able to add, delete, modify and search for items.

ALGORITHM:

Step1: start
Step2: Stock maintainance dashboard.
Step3: Add valuable customer details
Step4: Add stock or delete stock and check expiry.
Step5: Search for from medicine related to symptoms.

Step 6:- Calculate bill for purchased items from customer

Step 7:- stop.

Conclusion

→ The main objective is to provide customs with quality medicines. The project as a whole is used to handle medicine stock in a technological way.

→ The future scope of the project can be extended by adding other functionalities like plotting graphs for most selling medicines and the symtoms related to viral diseases.
